USER ACQUISITION AD FOR @ Pronto

UA AD ON PAGE 8

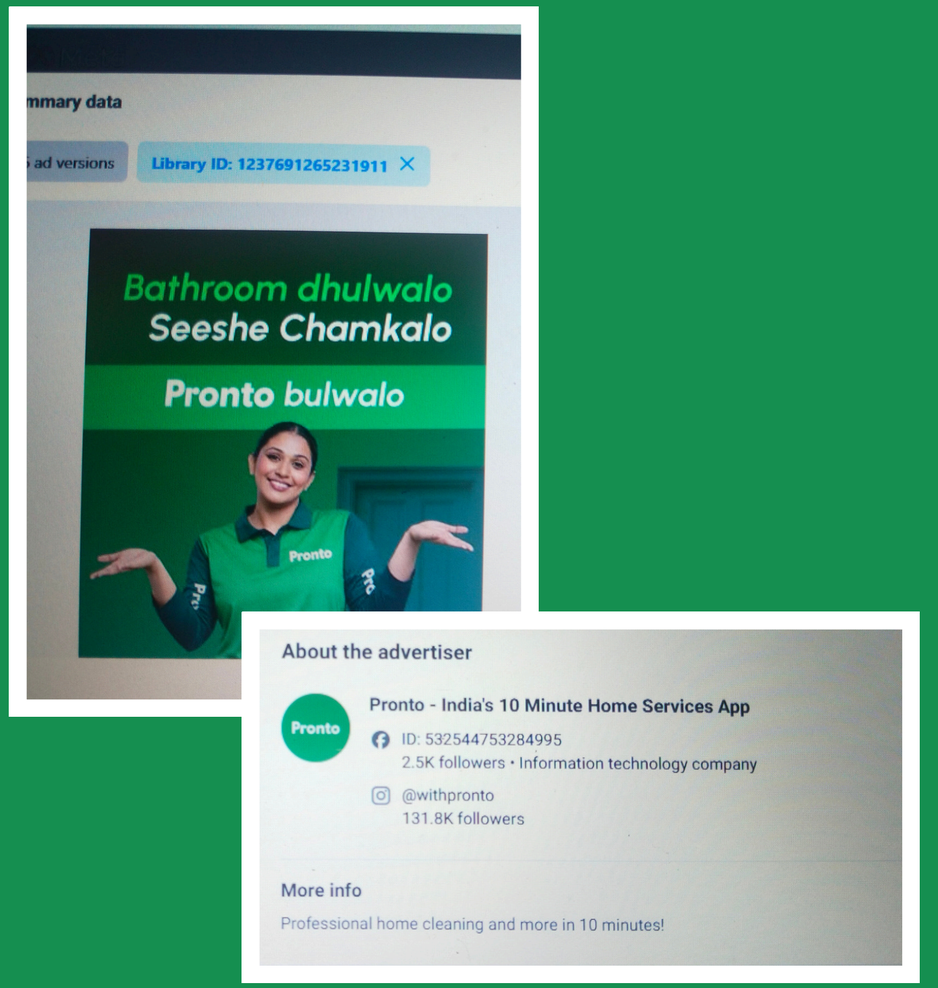

COMPETITOR AD ANALYSIS

- **STATIC IMAGE AD**

Hook: "Utensil cleaning starting at just ₹25/hour"

Why I Think It's Running:

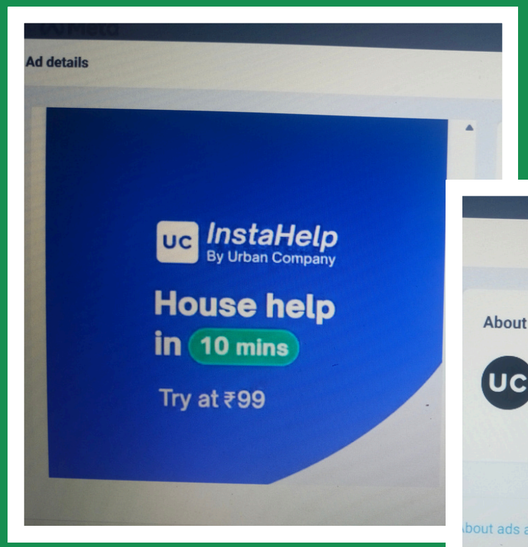

The ad is focused on direct conversions. By leading with a very low price, it reduces hesitation and encourages first-time trials.

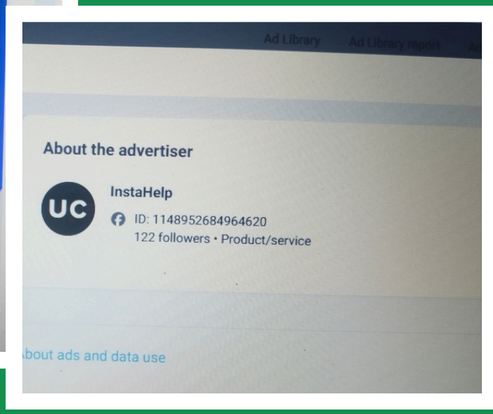

- **INSTAHELP (SERVICE-FOCUSED VIDEO)**

Hook: "Need household help today?

Shows service in action whilework is being done, saving time and money, more focus on services being provided

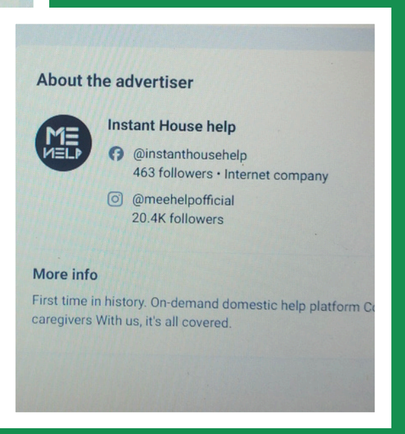

- **SNABBIT / (DAILY LIFE PROBLEM-SOLUTION VIDEO)**

MEEHELP

Hook: Busy household struggling with chores

The ad builds relatability first and then introduces the app, making the message feel less promotional and more natural.

Across competitors, the most common pattern was a strong emphasis on service clarity, affordability, and convenience. Static ads frequently highlighted pricing, while video ads focused on relatable household situations before introducing the service as the solution.

Ad Concept 1: Static Conversion Ad

While analyzing competitor ads, I noticed that many of the best-performing creatives were simple static posts that highlighted the service and pricing upfront. This format quickly communicates value and helps users understand what is being offered within a few seconds. The idea is to attract first-time users by making the service seem affordable and accessible.

Ad Concept 2: AI-Generated Relatable Video

Why I Chose It

AI-generated videos have been receiving high engagement recently and can help capture attention while users are scrolling. Instead of making the ad feel promotional from the start, I focused on a relatable household situation that many people experience. The goal is to create curiosity, keep viewers watching, and then introduce the service as the solution.

Ad Concept 3: UGC/Testimonial Ad

For household services, trust plays a major role in the decision-making process. A user-generated content style ad feels more authentic and relatable than a polished advertisement. By showing a real person's experience, the ad can reduce hesitation and make potential users feel more comfortable trying the service.

Chosen Ad Concept: AI-generated visuals of a woman struggling with household chores

Storyboard

The AI visuals attract attention because AI-generated content currently receives high engagement and curiosity, and is assumed to be more of a content than advertisement
This encourages first-time bookings.

Caption 1: Price Comparison

While researching competitor ads, I observed that many brands compared their service cost to small everyday expenses. This makes the pricing feel affordable and easy to justify.

Caption
A cup of chai or a sink full of dishes? ☕🍽️
The choice is yours , get your utensils cleaned and save your time for things that matter.
✨ Utensil cleaning starting at just ₹25/hour*
Book now and let us handle the chores

Caption 2: Basic message conversion captions

three things: the service being offered, the time required, and the cost. The messaging was simple and direct.

Utensil Cleaning⏱️ Starting from 1 Hour💰 Starting at just ₹25/hour*
Simple, affordable, and available when you need it.
Book trusted household help in minutes.

Caption 3: Storytelling

Since my video focuses on an overworked mother managing multiple household responsibilities, I wanted the caption to reflect that emotion and show the service as a practical solution.

Caption
From cooking...
to cleaning...
to washing dishes...
the work never really ends.
Give yourself a break and let someone else take care of the chores for a change.
.✨ Utensil cleaning starting at just ₹25/hour*
Book now and let us handle the chores

Metrics I Would Track for This UA Ad

- CTR (Click Through Rate) – To see if people are finding the ad interesting enough to click.
- Hook Rate (3-sec View Rate) – To check whether the opening household problem is stopping users from scrolling.
- Average Watch Time – To understand if users are watching till the solution and app showcase.
- CPC (Cost Per Click) – To measure how efficiently the ad is driving traffic.
- Install/Signup Rate – To see how many people actually take action after clicking.
- CPI (Cost Per Install) – To evaluate the cost-effectiveness of the campaign.
- Cost Per Booking/Lead – To measure the actual business impact of the ad.
- Saves & Shares – Important because home service ads are often saved for later use or shared with family members.

Why These Metrics?

Since the ad focuses on a relatable household problem, low pricing, and time-saving convenience, I would mainly look at engagement metrics (Hook Rate, CTR), conversion metrics (Install Rate, CPI), and business metrics (Cost Per Booking) to judge its performance.
